Amendments to the Claims

Please amend the claims as indicated below. This listing of claims will replace all prior versions and listings of claims in the application.

- 1. (Currently amended) Method for improving the mould release of concrete plaster or clay-based parts, involving the application to the mould of a non-emulsified <u>terpene derivative</u> composition containing less than 0.2 % by weight water comprising an ester of a fatty acid having between 4 and 24 carbon atoms and of a neopentyl polyol containing at least three hydroxyl groups.
- 2. (Original) Method according to claim 1, wherein the composition also contains at least one terpene derivative.
- 3. (Original) Method according to claim 2, wherein the terpene derivative is a terpene alcohol.
- 4. (Original) Method according to claim 1, wherein the composition also contains a component of inorganic origin.
- 5. (Previously presented) Method according to claim 1, wherein the neopentyl polyol is selected from trimethylolpropane and pentaerythritol.
- 6. (Original) Method according to claim 1, wherein the ester is an acid ester containing between 16 and 20 carbon atoms.
- 7. (Original) Method according to claim 1, wherein the ester is an unsaturated acid ester.
- 8. (Original) Method according to claim 7, wherein the ester is a tall oil fatty acid ester.
- 9. (Original) Method according to claim 1, wherein the ester is present in the composition in a proportion between 10 and 100 % by weight.
- 10. (Original) Method according to claim 9, wherein the ester is present in the composition in a proportion between 20 and 60 % by weight.

2

Application No. 10/550,127 Attorney-Docket No. 38624-100474

- 11. (Original) Method according to claim 2, wherein the terpene derivative contains terpineol.
- 12. (Original) Method according to claim 11, wherein the composition contains a plurality of terpineol isomers.
- 13. (Original) Method according to claim 2, wherein the terpene derivative is present in the composition in a proportion between 0 and 90 % by weight.
- 14. (Previously presented) Method according claim 4, wherein the component of inorganic origin is a solvent or a paraffinic, cycloparaffinic or aromatic oil, or a combination thereof.
- 15. (Original) Method according to claim 4, wherein the inorganic component is present in the composition in a proportion of between 0 and 90 % by weight.
- 16. (Original) Method according to claim 4, wherein the composition contains between 30 and 90 % by weight ester and between 70 and 10 % by weight terpene derivative.
- 17. (Original) Method according to claim 16, wherein the composition contains between 35 and 50 % by weight ester and between 50 and 65 % by weight terpene derivative.
